## ● Instruction

### ● Welcome to BackupKingX

Welcome to BackupKingX and thank you for using our software!

The following documentation will help you get started with the program.

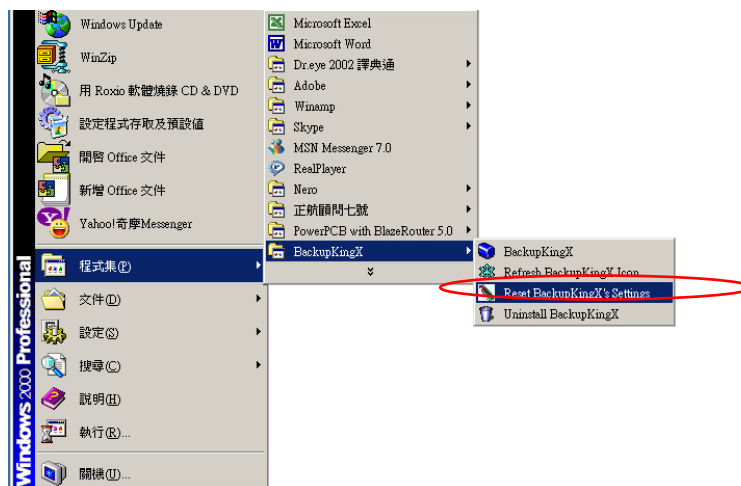

### ● About BackupKingX

BackupKingX is an ease-of-use program for data backup. It could backup any data to the disk you designate and restore at any time. By one button, our friendly user interface can help you backup your data easily and securely. The following are the main functions of BackupKingX.

1. Mail Backup: BackupKingX provides the function to backup/restore all your mails in Outlook Express or Microsoft Outlook.
2. My Favorite Backup: BackupKingX provides the function to backup, restore or synchronize your favorite website addresses stored in “Favorites” folder.
3. File Backup: You can backup, restore or synchronize any file into any folder into our enclosure.
4. One Touch Backup: By one button, you can reserve restore or synchronize your important data easily.

### ● Notice

1. If your “Enclosure” is not made with the chip, USB 4500, you are not able to use BackupKingX.
2. If your BackupKingX’s version is an older one, please click “Reset BackupKingX’s Settings” to reset BackupKingX.

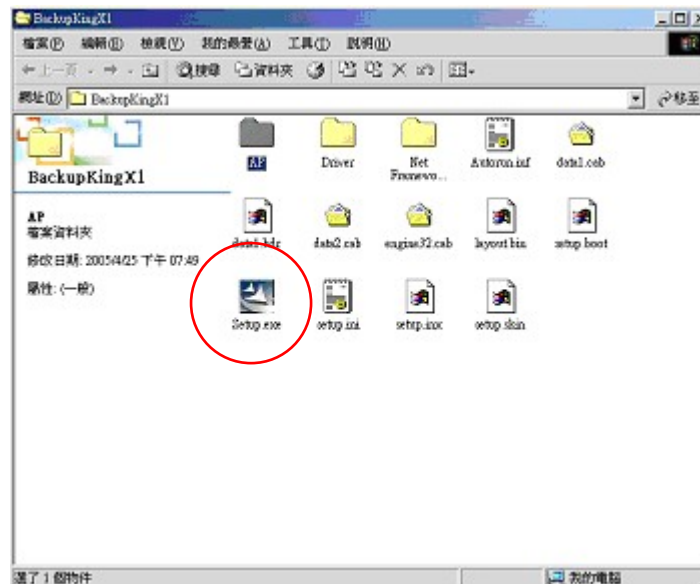

3. The one touch backup function only works on Windows 2000 and Windows XP.
4. Please use the backup software with cautions, the manufacturer will not hold the responsibility for the data loss.

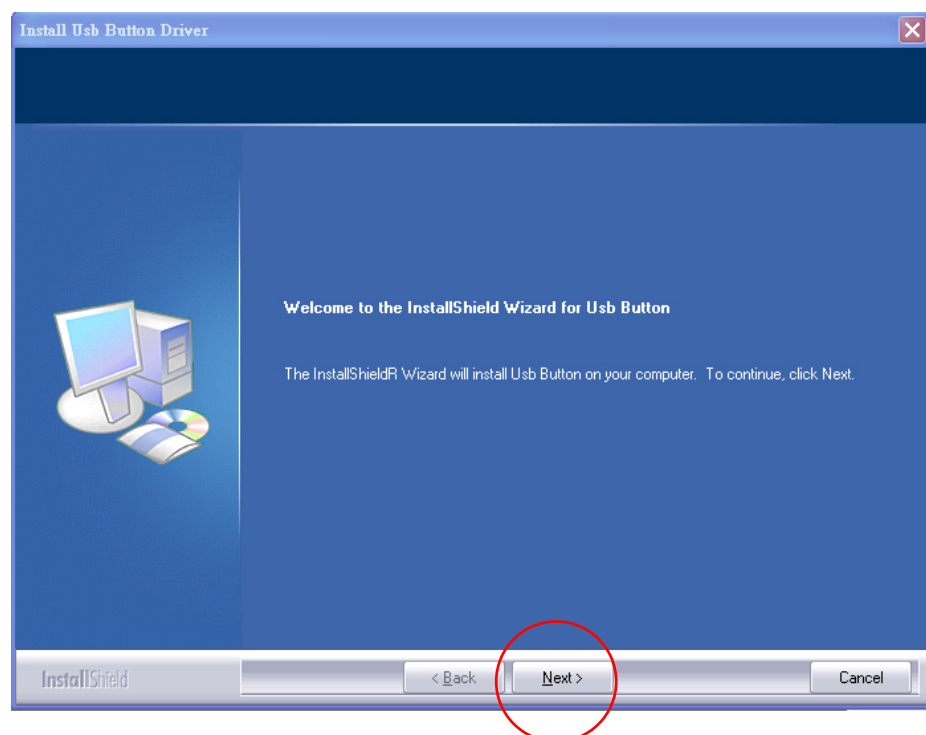

## ● Install BackupKingX

How to install BackupKingX™ software into your PC/NB for the first time:

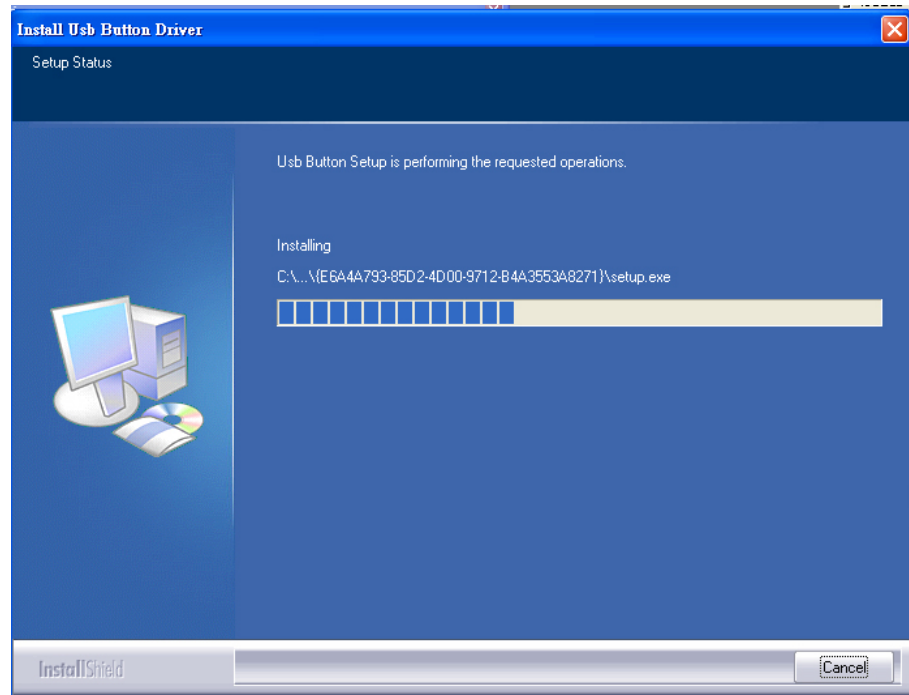

1. Double click “Steup.exe”.

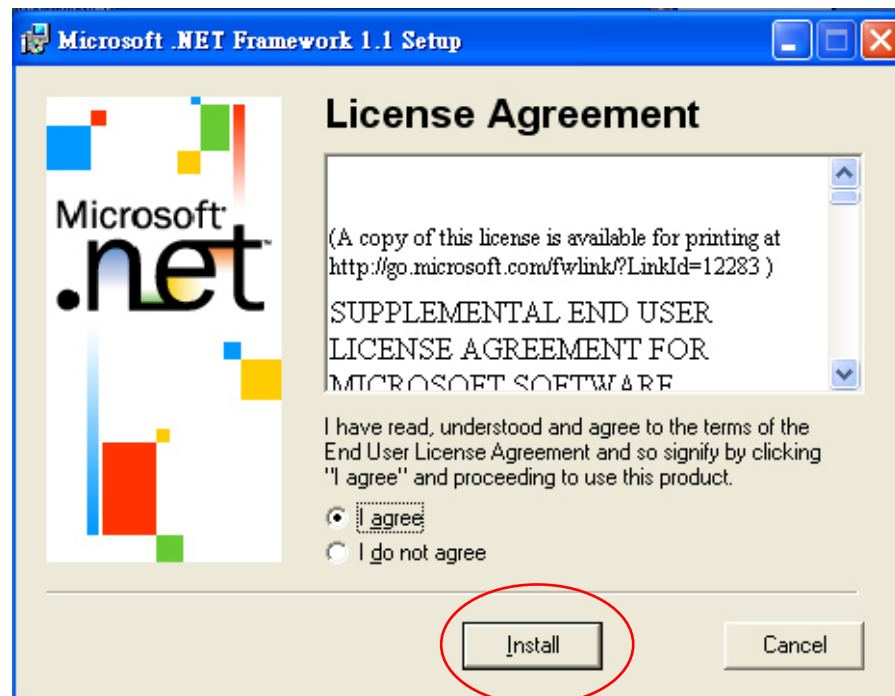

2. Click “Next”.

## ● Troubleshooting

If you've got problems installing BackupKingX™, for example, you have previous version BackupKingX™ installed and failed to upgrade with this new version, please check with the following table to find the proper instructions:

USB4500 Driver	.NET Framework 1.1	BackupKingX™	Solution
Not installed	Not installed	Not installed	Please refer to the instructions above to execute the first time installation.
Previous version	Not installed	Previous version	The Wizard would automatically detect the previous version BackupKingX™ was installed and ask if you want to remove the old version first. Please remove the old one and the following the steps as the first time installation mentioned above.
Previous version	Installed	Previous version	Remove the installed .NET Framework (Please refer to FAQ 1 for details.) first. The Wizard would automatically detect the previous version BackupKingX™ was installed and ask if you want to remove the old version. Please remove the old one and follow the first time installation steps mentioned above to complete the installation.
Not installed	Installed	Not installed	Remove the installed .NET Framework (Please refer to FAQ 1 for details) and follow the "First time installation" steps above.

## ● FAQ

Q. How to make sure if I have .NET Framework installed before and remove the previous installed one?

A. You could confirm this through "Start"->"Control Panel"->"Add/Remove Programs" to see if ".NET Framework 1.1" has been installed. If you want to remove the installed .NET Framework, click the "Remove" button on the right hand side of ".NET Framework 1.1" in the "Add/Remove Programs" window.
